SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
CC The invention describes a method of identifying compounds useful for CC modulating body weight, comprising contacting a test compound with a CC mammalian sequence 115. The method comprises: contacting a test compound CC with a mammalian sequence 115; determining whether the test compound CC binds to the mammalian sequence 115; and identifying a compound that CC binds to the mammalian sequence 115 as a compound useful for modulating CC body weight. Also described are: a pharmaceutical formulation or CC composition, for modulating body weight, comprising a compound that CC modulates the activity of a mammalian sequence 115, mixed with a CC pharmaceutical carrier; a package comprising the pharmaceutical CC formulation and instructions for administering the pharmaceutical CC composition useful for modulating body weight; treating obesity and CC cachexia; and an antibody that recognises an isolated polypeptide comprising a sequence of 1014 or 337 amino acids (SEQ ID NOS: 5 or 6). CC The method is useful for identifying compounds useful for modulating body weight. The formulation or composition and methods are useful for CC coupled receptor sequence 115.

CC binds to the mammalian sequence 115; and identifying a compound that CC binds to the mammalian sequence 115 as a compound useful for modulating CC body weight. Also described are: a pharmaceutical formulation or CC composition, for modulating body weight, comprising a compound that modulates the activity of a mammalian sequence 115, mixed with a CC pharmaceutical carrier; a package comprising the pharmaceutical CC formulation and instructions for administering the pharmaceutical CC formulation useful for modulating body weight; preparing a pharmaceutical CC composition useful for modulating body weight; treating obesity and CC cachexia; and an antibody that recognises an isolated polypeptide CC comprising a sequence of 1014 or 337 amino acids (SEQ ID NOS: 5 or 6). The method is useful for identifying compounds useful for modulating body weight. The formulation or composition and methods are useful for treating obesity and cachexia. This sequence encodes G protein coupled covered to the composity and cachexia. This sequence encodes G protein coupled covered to the composition of the composition composition and methods are useful for composition and methods are useful for composition composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 99.7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
The present invention relates to a new polypeptide encoded by a polymucleotide comprising a fully defined sequence of 1014 base pairs, as given in the specification. The polypeptide of the invention comprises a sequence at least 95% identical to a fully defined sequence of 337 amino acids as given in the specification, or a fragment or variant. The polypeptide, a putative G protein-coupled receptor designated AXOR49, and the nucleic acid that encodes it are useful for treating a very wide range of disease, e.g. infections (bacterial, viral, fungal or protozoal, especially human immune deficiency virus-i or -2), pain, cancer, diabetes, Parkinson's diseases, heart failure and allergy. The molecules of the invention can also be used to diagnose (susceptibility to) diseases (including detecting mutations or measuring mRNA or protein
                                                                                                                                                                                                                                                                                                                                                                                                                               of e.g.

Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina Parkinson's disease.

SEQ ID NO 865; 542pp; English.

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising a mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgenic mice. Which has from the transpenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising probes which hybridise to GPCR polymucleotides of the invention. The invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of

Also described: (1) a method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological disorder; and (3) a method for identifying a subject having a urological disorder; are compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder. Disorders include urinary incontinence and bening prostatic hyperplasia. The present sequence encodes a human urological disorder related protein, which is used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                          The sequence is the G protein coupled receptor flh2882 gene. The flh2882 protein AAY28488 is expressed predominantly in the brain and is 337 amino acids in length. The protein has seven transmembrane domains, AAY28489-Y28495. The type of response mediated by the flh2882 protein is dependent on the type of cell in which it is expressed eg. binding of ligand to flh2882 may result in adhesion migration or differentiation. Regardless of the cellular activity, it is universal that flh2882 interacts with a "G protein". The flh2882 protein and gene are useful for isolating compounds that modulate expression of or bind and interact with flh2882. They can also be used to identify homologues and allelic variants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             G protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Glucksmann MA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20-JAN-1999;

```

Transformation of cells with a fusion protein of an orphan receptor protein with a fluorescent protein useful for identification of ligands to the orphan receptor.

Example 4; SEQ ID NO 172; 594pp; Japanese.

This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.

New human G-protein coupled receptor (GPCR), useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR.

The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GPCRs), mutant (non-endogenous) versions of the GPCRs, and the polynuclectide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension, reflux disease, depression, migraine, schizophrenia, ulcers, psychotic disorders, asthma, bronchospasm, anaesthesia, myocardial infarction (MI), stroke, glaucoma, prostatic hyperplasia, epilepsy, prostate cancer, anxiety, prostatic hypertrophy, rhinitis, and angina. The present sequence encodes an endogenous human GPCR

Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.

Claim 13; SEQ ID NO 156; 542pp; English

CC mouse comprising a GPCR gene of the invention; a mouse comprising a GPCR gene of the invention; a mouse comprising a CCC from the trasngenic mice; kits comprising several mice, each of which has CCC amutation in a different GPCR gene of the invention; and kits comprising cCC probes which hybridise to GPCR gene of the invention; and kits comprising cCC probes which hybridise to GPCR polynucleotides of the invention. The CCC comprising a GPCR mucleic acid. The GPCR pulpeptides and vectors CCC comprising a GPCR mucleic acids and proteins may CCC be used in the diagnosis, treatment or prevention of a wide variety of CCC diseases including neurological disorders (e.g., Alzheimer's disease, disease); disorders of the colon or intestine CCC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel CCC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders (e.g., atoimune disorders (e.g., atoimune disorders or AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid CCC arthritis, grout or osteoporosis); metabolic or mutritive disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders (e.g., cancres, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCR-encoding CCC muterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and CCC not shown were obtained in electronic format directly from WIPO at CCC not shown were obtained in electronic format directly from WIPO at CCC. (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention, methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; invention relates to human and mouse G protein-coupled receptors a transgenic diseases

Sequence 1011 BP; 165 A; 347 ü 282 G; 217 T; 0 U; 0 Other

```
The invention describes a method of identifying compounds useful for modulating body weight, comprising contacting a test compound with a mammalian sequence 115. The method comprises: contacting a test compound with a mammalian sequence 115; determining whether the test compound that binds to the mammalian sequence 115; and identifying a compound that binds to the mammalian sequence 115; as a compound useful for modulating body weight. Also described are: a pharmaceutical formulation or composition, for modulating body weight, comprising a compound that modulates the activity of a mammalian sequence 115, mixed with a composition and instructions for administering the pharmaceutical formulation and instructions for administering the pharmaceutical formulation for modulating body weight; preparing a pharmaceutical composition useful for modulating body weight; treating obesity and cachexia; and an antibody that recognises an isolated polypeptide composition useful for identifying compounds useful for modulating body weight. The formulation or composition and methods are useful for treating obesity and cachexia. This sequence encodes rat G protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostice as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC useful for generating antibodies against it, detecting or quantitating a
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC is ites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activity. The
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC coding sequences of the invention. Note: The sequence data for this
CC coding sequences of the invention. Note: The sequence data for this
CC electronic format directly from WIPO at

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACHI-2789-ACH50831, whose sequence was CC determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences care useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations cresponsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The present sequence is one of the 38043 isolated CDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was considered in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence encodes a human G-protein coupled receptor (GPCR), hRUP23. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               P-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                     The invention relates to G protein-coupled receptor (GPCR) polypeptides and the polynucleotides encoding them. The GPCR polypeptides are useful for preparing a composition for identifying compounds as receptors, inverse agonists or partial agonists, having potential applicability as therappeutic agents. This sequence represents human GPCR cDNA of the
                                                                                                                                                                                                                                                                                       New G protein-coupled receptor (GPCR), useful for preparing a compo for identifying compounds as receptors, inverse agonists or partial agonists having potential applicability as therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13-OCT-1998;

The present sequence is that of cDNA encoding the novel human coupled receptor that is expressed predominantly in the brain and coupled receptor that is expressed predominantly in the brain and coupled receptor that is expressed predominantly in the brain and coupled receptor that is expressed predominantly in the brain and coupled receptor that is expressed predominantly in the brain and coupled the place of producing coupled the polypeptides and for detecting the nucleic acids. Also claimed are: a method for identifying a compound that binds to hCAR protein; a method coupled for modulating the activity of the protein; a method for treating a compound that binds to hCAR protein; a method coupled the need for inhibition of hCAR activity; a transgenic, chimeric, or knockout non-human animal comprising the present sequence; and a method for inhibiting expression of the hCAR gene. The invention coupled a method for inhibition of hCAR gene. The invention coupled a method for inhibition and delivery of hCAR protein by gene coupled the production and delivery of hCAR protein by gene coupled the production and delivery of hCAR protein by gene coupled to the production and tissue typing. An hCAR coupled can be used to treat a disease or disorder associated with abnormal or aberrant hCAR protein activity or hCAR nucleic acid continued to treat a disease or disorder associated with a continued to treat a disease or activity or hCAR nucleic acid disease or activity or hCAR nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Constitutively active reactor; human; hCAR; receptor; G-protein coupled receptor; cytostatic; neuroleptic; chromosome 4; gene therapy; gene; ss.
